

# ABSTRACT

An arrangement structure of a vehicle door open-close device 1 to automatically open and close a vehicle door by means of a driving force is comprised of a roof member, a side member, and a gazette member. The roof member is provided on a door-opening area for constituting a ceiling member of a vehicle body. The side member is provided on the door-opening area for constituting a side portion of a vehicle body. The gazette member is provided on the door-opening area for being attached to the roof member and the side member so as to extend over said roof member and said side member. Furthermore, said vehicle door open-close device is arranged in a space surrounded by said roof member, said side member, and said gazette member.
